

Install and Configure Syslog-ng on the Linux Instance

Summary

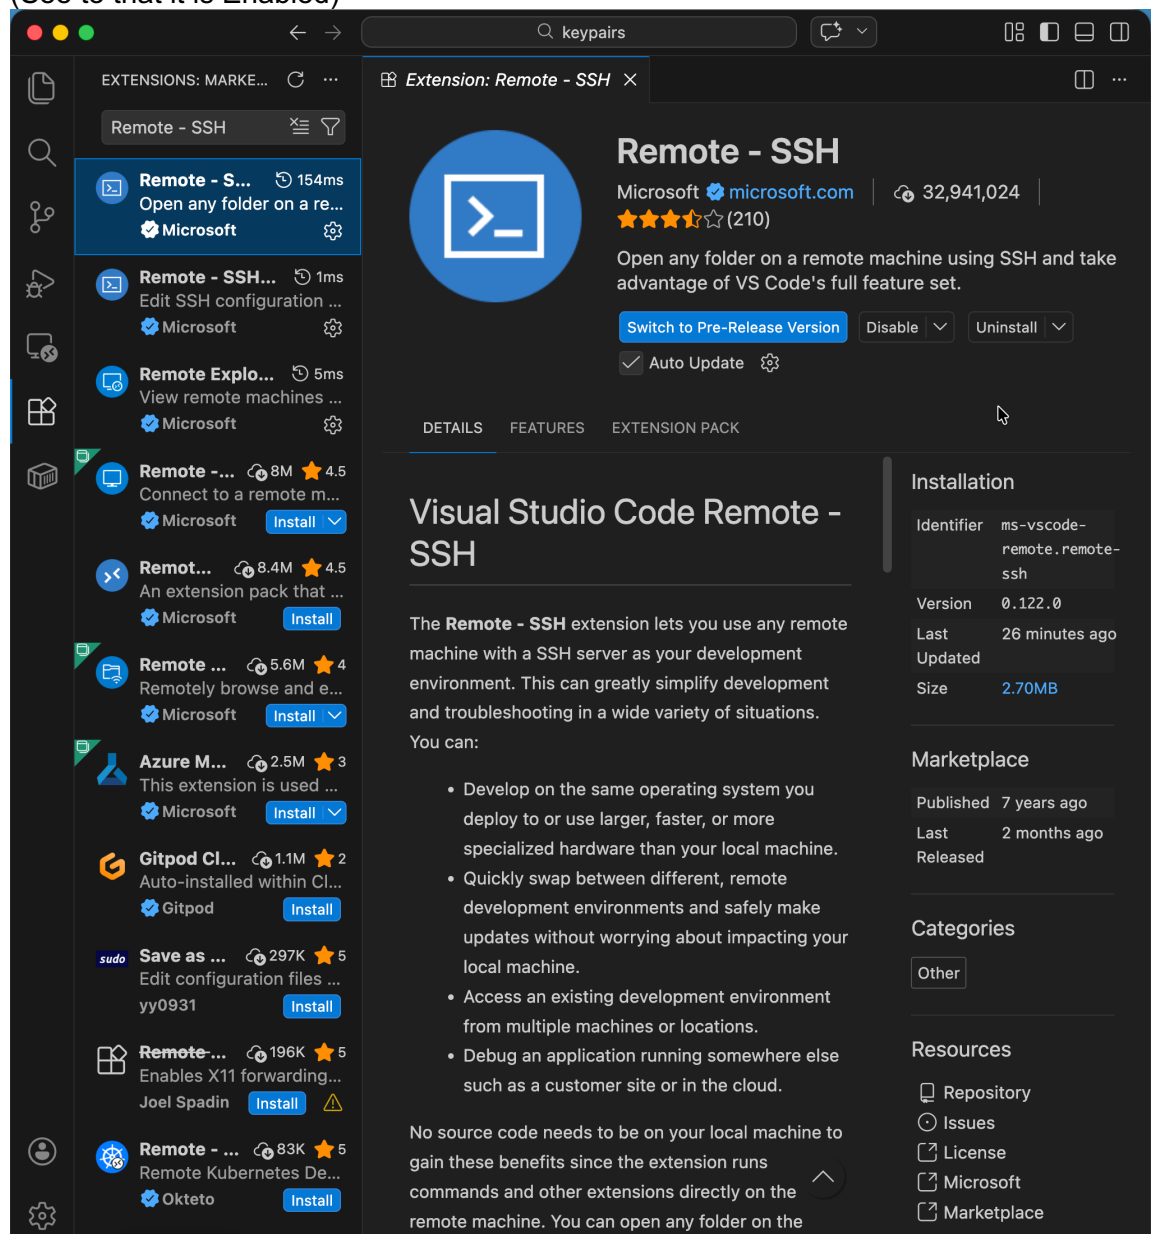

This document shows the step-by-step procedure to connect to the Linux instance via VS Code and install & Enable syslog-ng on the Linux EC2 instance.

1. Connect the Linux_Syslog_ng instance to Microsoft Visual Studio (VS) Code

1) Install Remote – SSH in VS Code

Open VS Code,

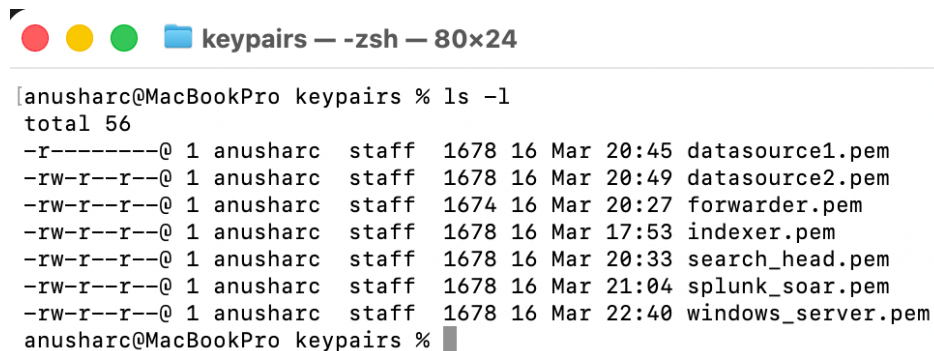

On the left-pane click on Extensions icon > Search Remote – SSH > Install
(See to that it is Enabled)

2) Change permissions of the private key

Open Terminal either on your OS or on VS Code

```
chmod 400 ~/Downloads/keypairs/<keyfile>.pem  
ls -l
```

keypairs — -zsh — 80x24

```
[anusharc@MacBookPro keypairs % ls -l  
total 56  
-r-----@ 1 anusharc  staff  1678 16 Mar 20:45 datasource1.pem  
-rw-r--r--@ 1 anusharc  staff  1678 16 Mar 20:49 datasource2.pem  
-rw-r--r--@ 1 anusharc  staff  1674 16 Mar 20:27 forwarder.pem  
-rw-r--r--@ 1 anusharc  staff  1678 16 Mar 17:53 indexer.pem  
-rw-r--r--@ 1 anusharc  staff  1678 16 Mar 20:33 search_head.pem  
-rw-r--r--@ 1 anusharc  staff  1678 16 Mar 21:04 splunk_soar.pem  
-rw-r--r--@ 1 anusharc  staff  1678 16 Mar 22:40 windows_server.pem  
anusharc@MacBookPro keypairs %
```

3) Add SSH Config in VS Code

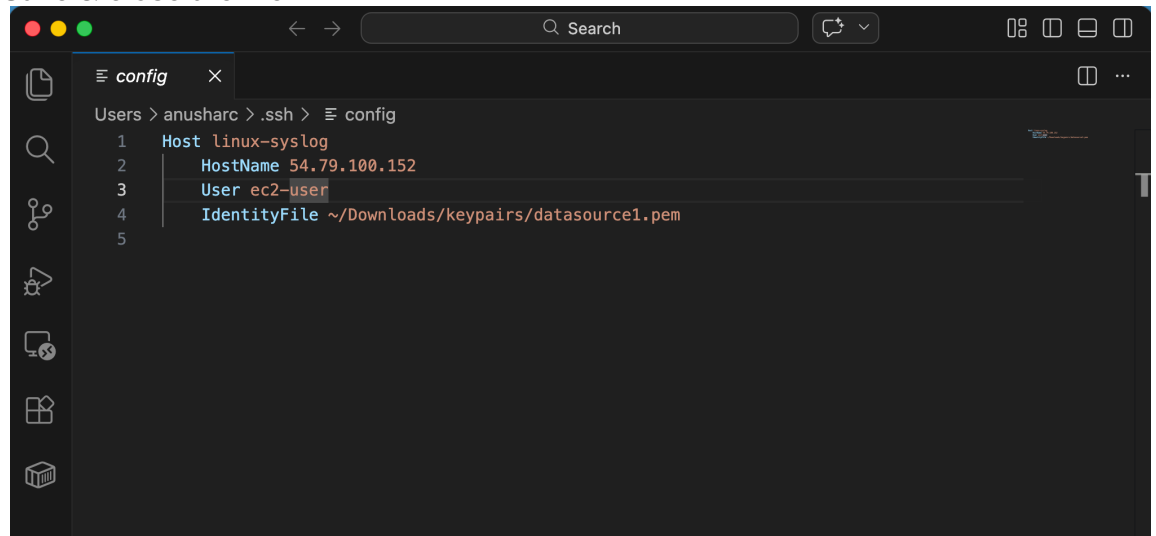

Press Cmd + Shift + P

Type “Remote” > Remote-SSH: Open SSH Configuration File > ~/.ssh/config

Enter the following:

```
Host linux-syslog  
  HostName <SYSLOG_IP>  
  User ec2-user  
  IdentityFile ~/Downloads/keypairs/<keyfile>.pem
```

Save & close the file.

4) Connect to the EC2 Server

Press Cmd + Shift + P

Type “Remote” > Remote-SSH: Connect to Host > linux-syslog

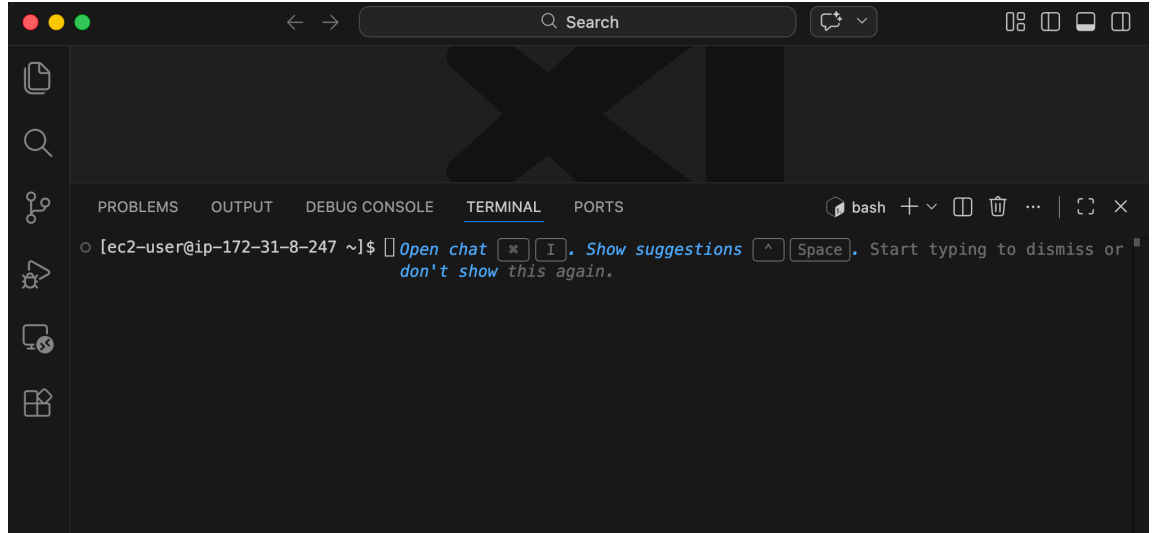

This will open a new window.

5) Verification

Open Terminal (^`) in the new opened window.
The Terminal should start with:

```
ec2-user@ip-<PUBLIC_IP> ~]$
```

This confirms that the SSH Connection to the EC2 instance is Successful.

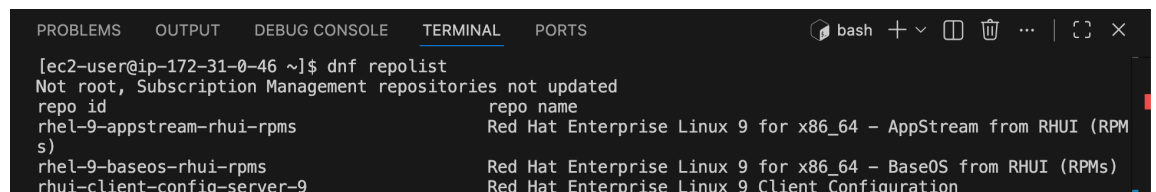

2. Install Syslog-ng

1) Check the repository list

Check the repository for RHEL 9 packages and any syslog-ng packages.

```
dnf repolist
```

2) Enable EPEL 9

Try installing syslog-ng:

```
sudo dnf install syslog-ng
```

If it says, "Not Found", then enable EPEL:

```
sudo dnf install
```

```
https://dl.fedoraproject.org/pub/epel/epel-release-latest-9.noarch.rpm
```

```

rch.rpm

This system is not registered with an entitlement server. You can use "rhc" or "subscription-manager" to regi
ster.
