

Connect SIEM with SOAR – Intergrate Splunk SOAR with Splunk Enterprise (Search Head)

Summary

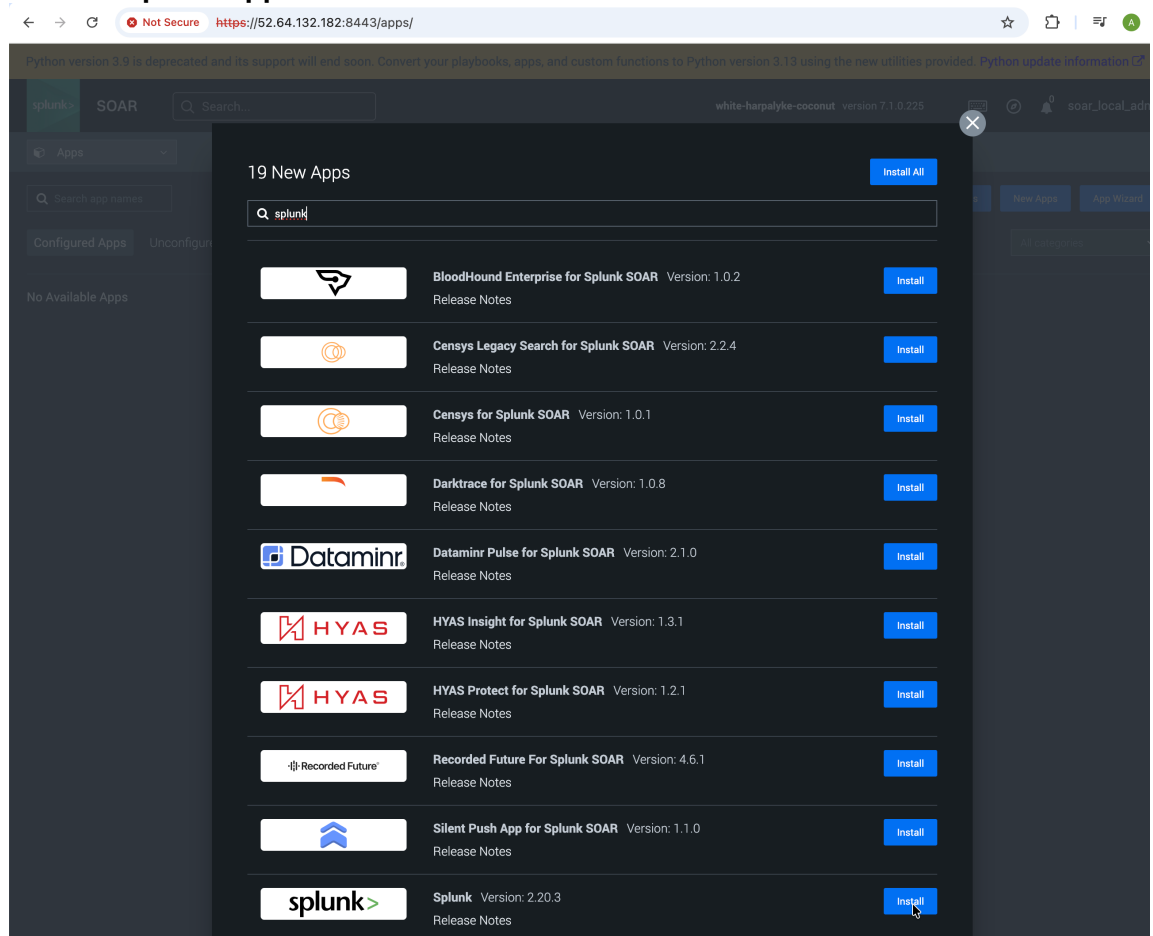

This document includes steps for installing Splunk app on SOAR and then connecting to the Splunk Instance from SOAR via this app and Testing the connectivity.

1. Install Splunk App on SOAR

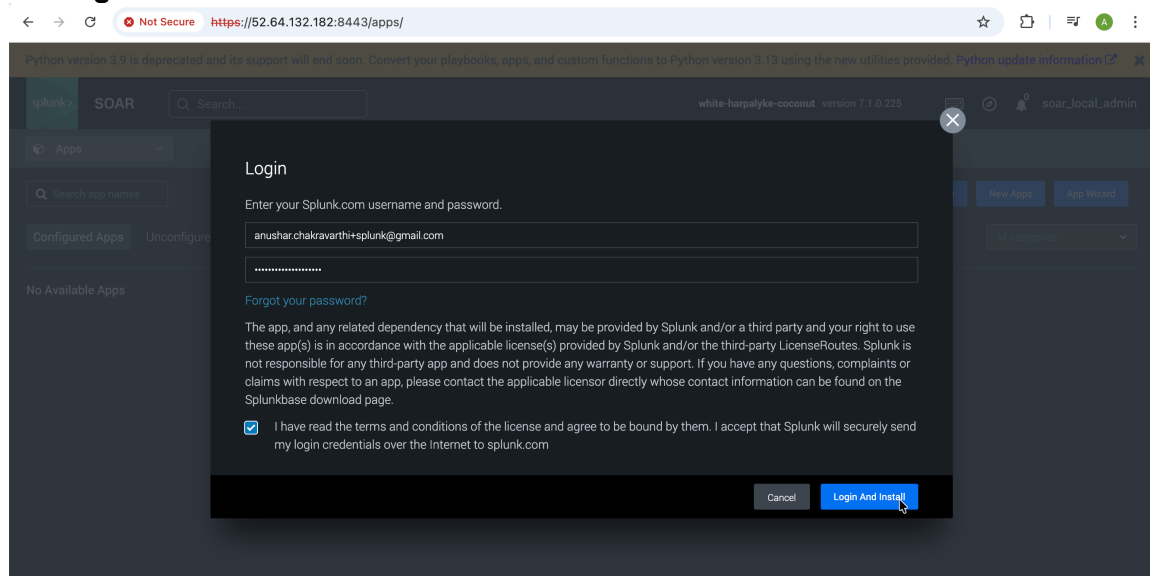

- 1) In the **Splunk SOAR UI**,
Go to **Home > Apps**

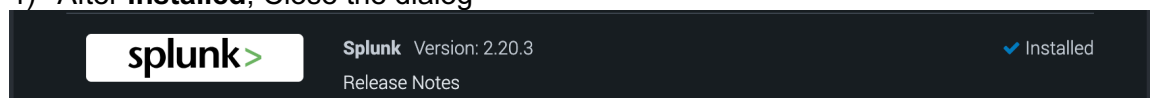

2) Click on **New Apps > Search for “Splunk”**
Find **Splunk app > Install**

3) Provide your **splunk.com** user credentials and accept terms and conditions >
Login and Install

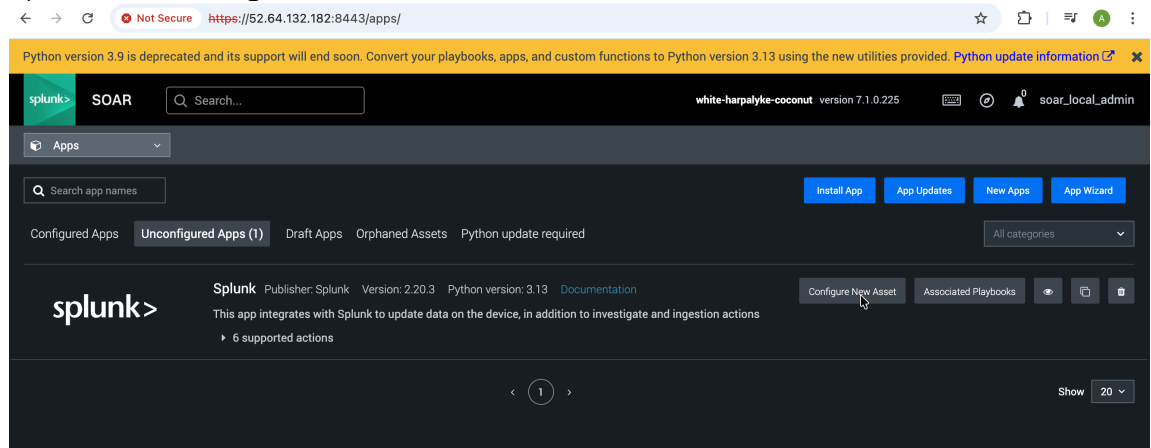

4) After **Installed**, Close the dialog

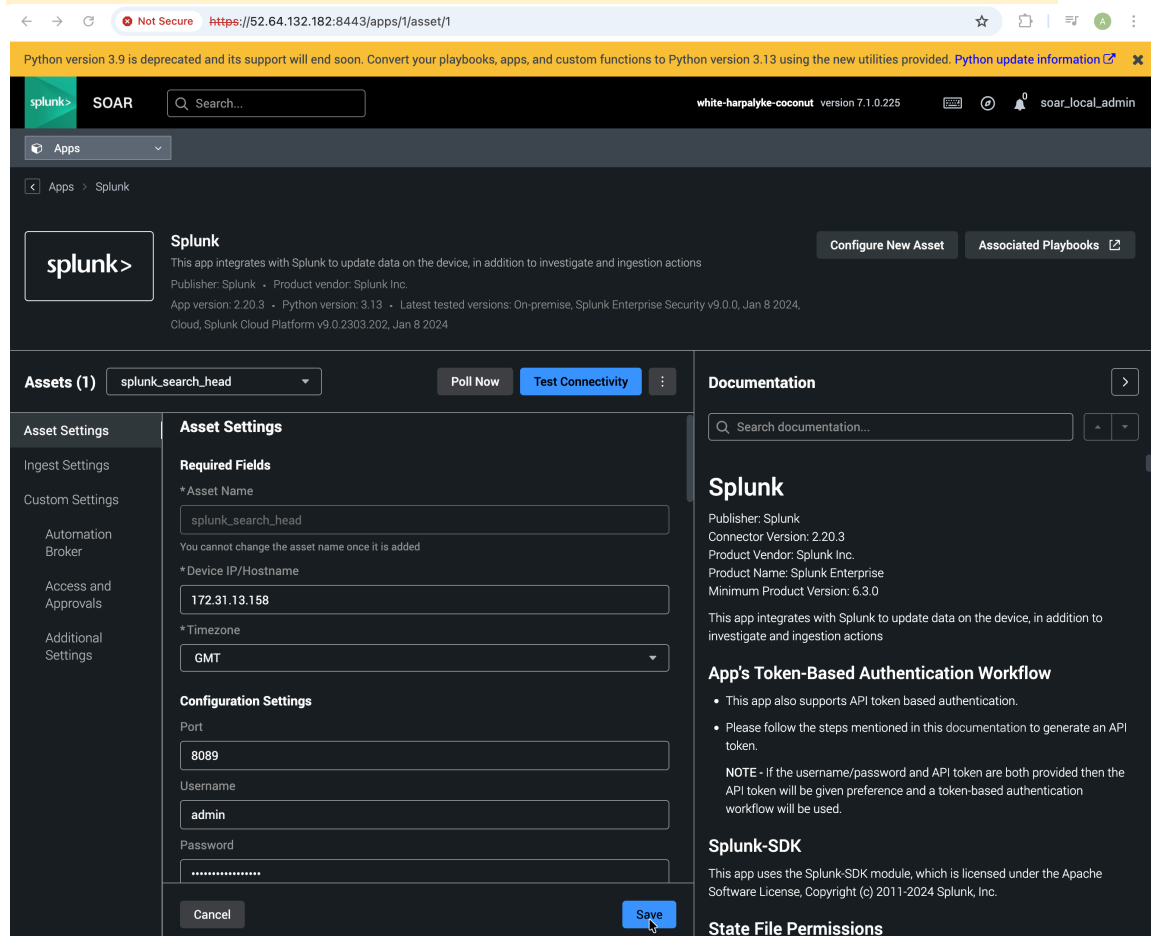

2. Configure the Splunk app

1) Click on **Configure New Asset**

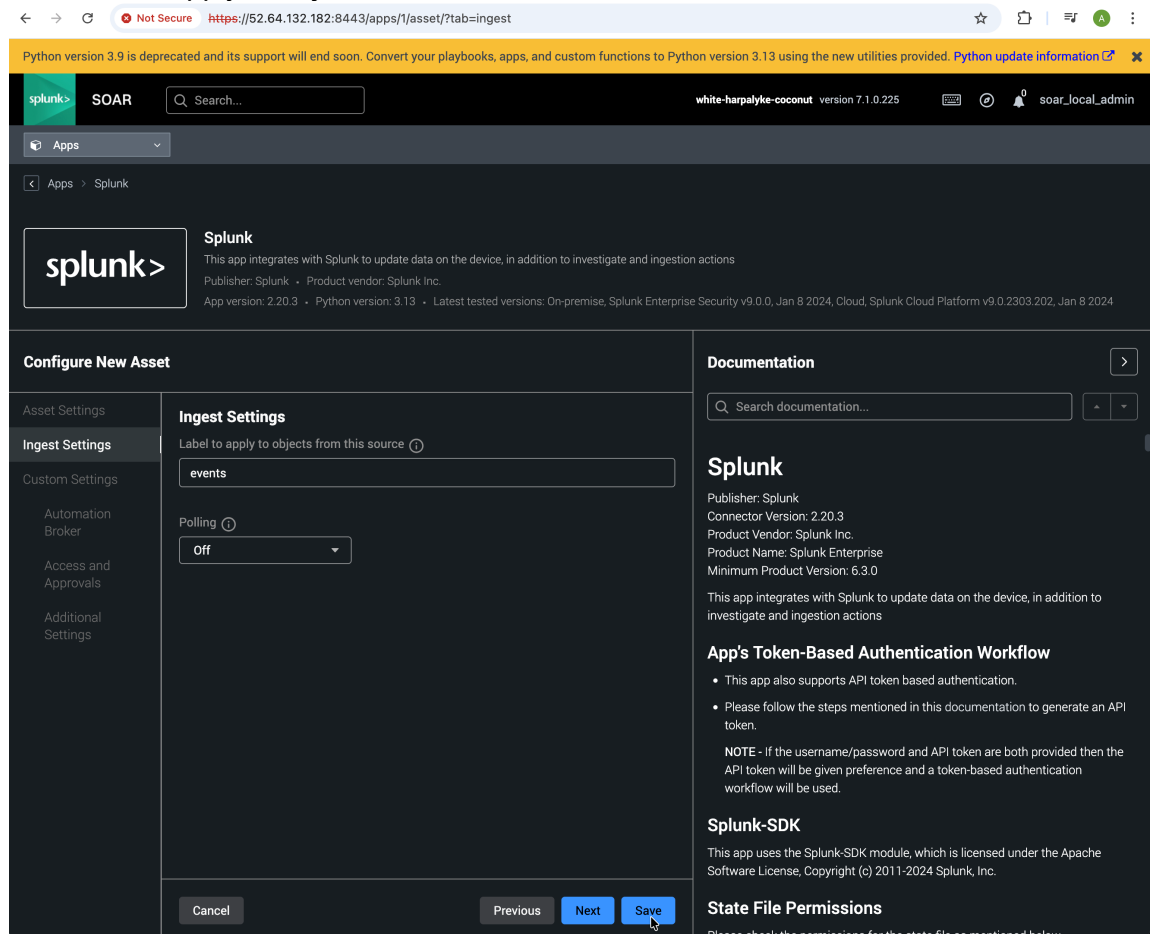

2) Enter the following in required fields:

```
Asset Name: splunk_search_head
Device IP/Hostname: <SearchHead_PrivateIP>
Timezone: GMT
Port: 8089
Username: admin (SearchHeadUN)
Password: ***** (SearchHeadPwd) > Save
```

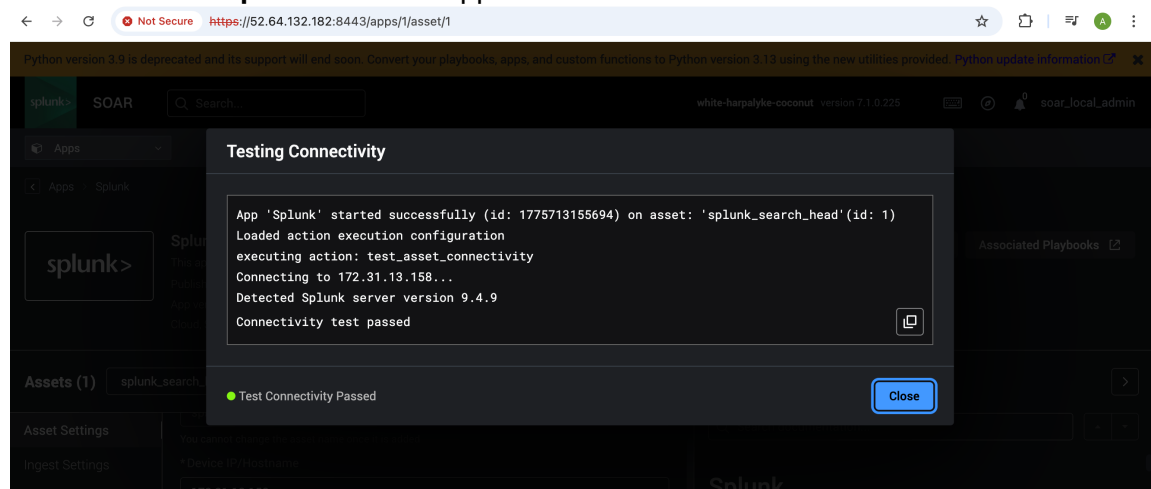

3) In **Ingest Settings**, Label to apply to objects from this source: Select **events** > **Save**

3. Test Connectivity

Click **Test Connectivity**,
Connection test passed should appear > **Close**

Note: If the test connection fails, then check the backend and UI of Splunk Enterprise is running and ensure that the private IP address, Username and Password of Splunk Enterprise (Search Head) match the SOAR Splunk app Device

IP/hostname, Username and Password respectively in asset configuration and then try again to connect.

Next Steps

Install required apps in Indexer and Search Head – Refer **12_Install_required_app_Indexer_n_SearchHead_V1.pdf**.
